

WYEVALE CONCRETE PRODUCTS LTD.

75TH ANNIVERSARY

Wyevale Concrete

Opened first in 1951, the owners Vic and Mary Campbell started making concrete blocks and bricks. As the local beaches began to open up, precast products seemed like the logical next step.

Septic tanks, well tile and patio stones were the main products of the day. During the 90's, Wyevale Precast was born, this being primarily a custom precast company.

Now, we do everything from those early products to many shapes and sizes of window sills and architectural banding to drainage solutions and public art. When you purchase from us, you can rest assured that you are receiving the best in reliability and safety.

Septic Tanks

These may be the most environmentally important products we make. Everyone poops. As the world's water supply becomes more and more threatened, cleaning up what we use to push our waste around is vital. Gone are the days when we bury it and forget it.

Wyevale Concrete septic tanks range from 4,500 litres (1,000 gal.) to 9,000 litres (2,000 gal.) and are designed to minimize the movement of solids from the primary chamber to the leaching field.

Holding Tanks

Where a whole septic system is not possible a holding tank may be required. Unlike a septic tank that digests and separates our waste, these only hold waste and water. Frequent and expensive pump outs are needed here. These are available from 6,800 litres (1,500 gal.) to 9,000 litres (2,000 gal.) Generally municipalities have minimum requirements for holding tank use.

Septic Tank Risers

As mandatory inspections come into effect across the province, easy access to your septic tank is important. Wyevale Concrete manufactures riser kits for our own tanks as well as other manufacturers.

Pump Chambers

Occasionally the topography of a building lot requires a leaching field be higher than the septic tank. In a case like this, a pump chamber is needed. It fills with effluent that is then pumped up to a bed. A leaching field a great distance from the septic tank or a high pressure dousing system would also require a pump chamber.

Catch Basins & Well Tile

Catch Basins - By modifying old well tile moulds, we are able to make small residential catch basins. Although not municipal grade, they are great to handle rain water runoff from eave troughs, surface gutters and small parking lots. They work well with our precast gutter drains. These can be made with or without bottoms.

Well Tile - Although not as popular as they once were, we still manufacture well crocks and covers from 24" to 48" inside diameters. We have old-school covers with square access openings, or new-school water proof lids to prevent surface water entry.

Decorative Caps

Post Caps - Masonry posts need a durable cover to keep out water. With or without lights these caps, like sills, all have uniform drip grooves to protect the masonry below. Custom sizes are available in square, round, rectangular, smooth, or stone-faced

Transition Caps - These caps create a break between masonry construction and wood or steel framing. Cast as one piece where a post bears upon it or cast split with a hole to fit around a post, options are endless.

Wall Coping - As with post caps, masonry walls also need to be protected from the weather. Wall copings necessarily come in larger sections which make them more stable. If they are too long, however, they can be too heavy to handle. Flat or pitched, smooth or stone faced, we make sections to suit your application and minimize the number of joints.

Chimney Caps - A tough environment for concrete. Warm when the furnace or stove is on and cold when they're not, these constantly changing temperatures and freeze/thaw cycles, can tear poor quality concrete apart. As with all of our products, our chimney caps are manufactured with quality air entrained concrete. Every one with a uniform drip groove to protect the masonry below.

Lawn & Garden

Planters - Although not a big seller, we do offer some unique styles. From time to time we are asked to make custom planters. We keep all of our old moulds so if you see something you like or have a special occasion that might require something special just contact us.

Patio Stones - Once a regular production item we now only produce these on demand. Great for the DIY folks, these slabs cover ground quickly and economically. Unlike the cheap stones that have flooded the big box stores, ours are still hand crafted.

Park Benches - In this crazy busy world we live in it's very important to stop and take a load off sometimes. Wyevale Concrete has just the spot. From a plain bench to one with a business message or memory of a loved one, we have the bench for you.

Window Components

Window Surrounds - We start at the bottom with a window sill. These should always be one piece where possible. When we can't achieve this, we recommend stainless steel flashing under the joint, because it is very important to keep water out from behind the masonry veneer. Sills should also protrude out from the veneer enough to shed water off the wall below. A uniform drip groove ensures water will not run back to the wall.

Vertical sections form a uniform line adjacent to the window. Although not as important as a sill, they can frame a window nicely. When possible we try to do one piece sections for ease of assembly for the mason.

Lintels & Key Stones

Lintels support the masonry over a window or door. Wyevale Concrete lintels are designed to carry the masonry loading for openings up to 3380 mm (133 inches), without needing steel beams. Longer spans require steel beam support.

Hearths & Mantels

Heavy timber beams make lovely mantel pieces, however as the rules and regulations of house construction change, often flammable material cannot be too close to a heat source.

With modern moulding methods and coloured concrete, we are able to copy the look of traditional timbers without the worry of regulation setbacks.

Hearths - Traditionally made of stone, we are able to offer a wide variety of textures, colours and shapes to compliment any fire place or stove.

2026 PRICE LIST

PARK BENCHES

Weather-Protected Finish

A	2 x 4 top boards	\$562.00
B	2 x 6 and 2 x 4 top boards	\$578.00
C	2 x 6 top boards	\$583.00
